KARAN DHIKALE

Computer Engineering Undergraduate
Nashik, Maharashtra, India | 9370168244 | karandhikale06@gmail.com
linkedin.com/in/karan-dhikale | github.com/KaranDhikale

PROFILE

Computer Engineering undergraduate with a CGPA of 9.09 targeting Backend Development and AI Integration & Agentic Systems internships. Experienced with Python, FastAPI, and Flask for building APIs, with hands-on exposure to relational (MySQL) and NoSQL (MongoDB) databases and AI-assisted development tools such as Google Antigravity.

TECHNICAL SKILLS

Languages Python, Java, C++
Frameworks Flask, FastAPI
Databases MySQL, MongoDB
Tools & Platforms Git, VS Code, Google Antigravity
Concepts Object-Oriented Programming, Data Structures & Algorithms

EDUCATION

Bachelor of Technology (B.Tech), Computer Engineering Expected Graduation: 2028
Matoshri College of Engineering and Research Centre (MCOERC), Nashik – Savitribai Phule Pune University (SPPU)
CGPA: 9.09 (Second Year) | HSC: 87% | SSC: 87%
Relevant Coursework: Cloud Computing, DBMS, Computer Networks, Software Engineering, Data Structures & Algorithms

PROJECTS

TalentX – Sports Performance Assessment Platform *HTML, CSS, JavaScript, Firebase, OpenCV*

- Built a web platform to assess athletes' performance by capturing and analyzing sports-related video and performance data, helping identify strengths, weaknesses, and overall potential.
- Independently designed and implemented the ranking system in JavaScript (with AI-assisted development), scoring and ordering athletes based on captured performance metrics.
- Used OpenCV for video-based performance analysis and Firebase as the backend database for storing athlete and assessment data.

CineBook – Cinema Ticket Booking System *Java, Swing, MySQL 8, JDBC, Maven*
GitHub: github.com/Sudarshan-101/CineBook

- Built a desktop booking application where customers browse shows, select seats using a live seat map, and book tickets. Admins manage movies, cinemas, screens, seats, and shows through an eight-tab console.
- Designed a normalized 3NF MySQL schema with nine tables, two views, indexes, CHECK, UNIQUE, and foreign key constraints.
- Implemented bookings as ACID transactions using SELECT FOR UPDATE row locking, availability rechecks, and a database trigger to prevent double bookings and roll back failures.
- Structured the application into model, DAO, service, and UI layers using JDBC and PreparedStatements. Added six SQL analytics reports and a scheduler to generate shows for the next ten days.

CERTIFICATIONS & WORKSHOPS

- Firebase Studio Workshop – Organized by Google Developer Groups (GDG Nashik)
- be10x Workshop – Python with AI
- Intellipaat – Java Programming Course

EXTRACURRICULAR ACTIVITIES

- Participant, Hacktoberfest Grand Hackathon – organized by GDG Nashik
- Participant, Smart India Hackathon (SIH) 2025
